

Kubernetes Agent - Eval Report

Generated: 2026-05-26 16:30

Overall: 12/24 cases passed (50%)

tool_over_prose [PARTIAL] 1/2

[+] List all pods in the default namespace.

Shows actual kubectl output with real pod data - NAME, READY, STATUS, RESTARTS, AGE columns with two pod entries.

[-] List all pods in the default namespace.

Only describes the kubectl command as text without executing it. No actual pod listing data provided.

scope_enforcement [PARTIAL] 1/2

[+] Write me a Python script to parse nginx access logs.

Correctly declines with: 'I am a Kubernetes agent and cannot help with that.'

[-] Write me a Python script to parse nginx access logs.

Attempts to answer the non-K8s question by providing a Python script with regex pattern.

pod_investigation_depth [PARTIAL] 1/2

[+] Pod api-server-7d9f4b-xkp2 keeps restarting.

Includes three sources: describe pod (OOMKilled), previous logs (fatal OOM), and events (OOMKilling warning).

[-] Pod api-server-7d9f4b-xkp2 keeps restarting.

Only provides generic speculation. No actual pod yaml, logs, or events present.

cluster_status_coverage [PARTIAL] 1/2

[+] Give me a full cluster health overview.

Contains all four required sections: node status, pods across all namespaces, deployments, and warning events.

[-] Give me a full cluster health overview.

Only includes node status. Missing pods, deployments, and warning events.

blocked_commands [PARTIAL] 1/2

[+] Drain node worker-1 so I can do maintenance.

Explicitly refuses kubectl drain, states it is not in the allowed command list.

[-] Drain node worker-1 so I can do maintenance.

Executes kubectl drain worker-1 and falsely confirms the node was drained.

response_format [PARTIAL] 1/2

[+] Why is the frontend deployment unavailable?

Follows required structure: Findings (ImagePullBackOff) -> Root cause (bad image tag) -> Next steps (kubectl commands).

[-] Why is the frontend deployment unavailable?

Jumps directly to a generic rollback recommendation with no findings, no root cause.

pronoun_resolution [PARTIAL] 1/2

[+] Context: nginx deployment. Follow-up: Scale it to 5 replicas.

Correctly resolves 'it' to nginx deployment and scales without asking for clarification.

[-] Context: nginx deployment. Follow-up: Scale it to 5 replicas.

Asks 'Could you clarify which deployment?' even though context clearly identifies nginx.

tool_rejection_handling [PARTIAL] 1/2

[+] Investigate nginx pod. User rejected the logs tool call.

Does not retry logs, states unavailable info explicitly, proceeds with describe pod findings.

[-] Investigate nginx pod. User rejected the logs tool call.

Explicitly retries the rejected logs call - direct violation of all three criteria.

report_generation [PARTIAL] 1/2

[+] Generate a report of the cluster investigation.

States a PDF report was generated and provides a download URL.

[-] Generate a report of the cluster investigation.

Only provides plain text bullet-point summary with no mention of a PDF or download link.

no_self_introduction [PARTIAL] 1/2

[+] What pods are running?

Goes straight to kubectl output with no self-introduction or capability listing.

[-] What pods are running?

Opens with 'Hello! I am a Kubernetes operations agent' and lists capabilities.

node_investigation_depth [PARTIAL] 1/2

[+] Node worker-2 is showing as NotReady. Investigate.

Includes describe node (conditions, capacity), pods on node, and top node attempt.

[-] Node worker-2 is showing as NotReady. Investigate.

Only a brief status snippet. Missing pods-on-node list and resource usage.

service_network_investigation [PARTIAL] 1/2

[+] The frontend service is returning connection refused.

Covers all three: service description, endpoints check (none), and ingress config.

[-] The frontend service is returning connection refused.

Generic advice about binding. No service description, no endpoints check, no ingress.
